Les Fleurs, Sofia, Bulgaria

The Challenge

Situated in the heart of Sofia, Les Fleures is a new Boutique hotel with a stunning design. The new Les Fleurs Hotel has appeared with its floral concept as a result of refurbishment of the building with one of the earliest modern structures in Sofia. It offers 31 non-smoking rooms, each room with its own floral theme. As a result, each room is different from the others in terms of size, form, materials, and colors.

The Solution

The system chosen for this uniquely designed layout was Mitsubishi Electric's CITY MULTI R2 series for its first and only "2-pipe" simultaneous cooling and heating system. Ensuring personalized comfort and individual climate control adds the joy of staying at a stylish accommodation.
